SUMMARY

Full Stack Developer with 5+ years of experience building web applications and APIs across both greenfield projects and established systems. Strong in PHP and Laravel, with hands-on experience making technical implementation decisions, integrating APIs, refactoring existing code, and improving application performance.

TECHNICAL SKILLS

Backend / Full Stack:	PHP, Laravel, CodeIgniter, Java, MySQL, Redis, RESTful APIs, Service Layer Architecture, CQRS
Frontend:	JavaScript, jQuery, React.js, HTML5, CSS3
Tools:	Git, GitHub/GitLab, Docker, PHPUnit, Postman, Agile/Scrum, Figma, Android Studio

WORK EXPERIENCE

Mid-level Full Stack Developer (PHP / Laravel)

MicroSourcing - Remote **Nov 2025 - May 2026**

- Developed a multi-step form for an existing Laravel application, implementing step-specific endpoints, validation, and data persistence while supporting users through the complete submission workflow.
- Refactored existing application logic by extracting responsibilities from large methods into dedicated methods, improving the structure and maintainability of code related to new features.
- Implemented client-side and server-side validation for form submissions, using frontend validation to prevent unnecessary requests and Laravel FormRequest validation to enforce backend validation.
- Integrated an external payment provider through its API to enable payment functionality within the application.
- Identified and fixed application bugs, then tested changes against the existing system to verify functionality and help prevent regressions.
- Used AI-assisted development tools to analyze existing code, review implementations, and identify potential issues while independently developing, validating, and testing changes.

Full Stack Developer

8Bacus - Onsite **Jul 2024 - Sep 2025**

- Developed multiple greenfield web applications and APIs using Laravel, including user-facing platforms, administrative interfaces, authentication services, promotional landing pages, and subsequent platform versions.
- Developed a full-stack web platform from scratch within two months as part of a two-developer team, delivering responsive user-facing and administrative interfaces with React and Laravel based on Figma specifications.
- Selected React.js as the frontend framework for the project, moving from the team's traditional Laravel Blade approach and making the framework decision based on the project's development needs and team expertise.
- Integrated external provider APIs to retrieve game access links, connecting provider-hosted services with the application's user-facing functionality.
- Applied service-layer and CQRS architecture to separate application responsibilities, organizing business logic through dedicated services and command/query components.
- Reviewed code changes and implemented updates across staging and production, participating in both formal code reviews and collaborative implementation reviews to maintain code quality.

Jr. Full Stack Developer
Elgada BPO Solutions, Inc. - Hybrid **Jan 2023 - Mar 2024**

- Developed and maintained RESTful APIs and backend functionality for a doctor license monitoring application serving a U.S.-based client.
- Investigated and optimized database queries to reduce unnecessary database load, using Eloquent scopes for maintainable query logic and Redis caching to avoid repeated data retrieval.
- Identified and resolved bugs in existing database queries while reviewing application data and network activity to diagnose performance and data-access issues.
- Implemented automated email notifications triggered by changes in doctor license status, working directly with the product owner to implement the required backend logic.
- Wrote and maintained PHPUnit tests for application features and report generation to validate backend functionality and help prevent regressions.
- Collaborated within a Scrum-based Agile team, participating in daily standups, code reviews, and iterative feature development.

Web Developer
National Center For Mental Health - Hybrid **Apr 2021 - Jun 2022**

- Developed three separate Electronic Medical Record (EMR) applications for OPD, IPD, and ER from scratch using PHP and CodeIgniter.
- Collaborated within a three-developer Agile team, working through sprints, daily standups, sprint planning, and Scrum/Kanban practices to incrementally develop the EMR applications.
- Worked directly with doctors, nurses, and other hospital stakeholders to translate workflow requirements into application features through a ticket-based development process.
- Developed and enhanced application functionality using the MVC architecture, with Docker used for the development environment.
- Manually tested developed features to verify functionality and identify issues, including demonstrations and feedback sessions with hospital users.
- Reviewed code and implementations with fellow developers, incorporating peer feedback and validating changes as part of the development process.

Junior Back End Programmer
LEEKIE Enterprise Inc - Onsite **Mar 2020 - Aug 2020**

- Developed two separate CRUD applications using Laravel and CodeIgniter to demonstrate backend development fundamentals.
- Studied and tested existing API endpoints to understand their functionality, request/response behavior, and integration flow.
- Created shared technical documentation and reference notes based on API/system reviews to support my understanding and provide accessible reference material for the team.

System Programmer
Abztrak Inc - Onsite **Dec 2018 - May 2019**

- Developed an Android version of TindaPOS using Java and Android Studio, translating the existing POS system's functionality into an Android application.
- Built the application's local data models using Room Database entities and adapted the system for Android.
- Diagnosed and resolved bugs while implementing feature enhancements and UI updates throughout the application.
- Tested the application directly on physical Android devices and across Android 4.4–7.1 to verify functionality and compatibility.

EDUCATION

Information Technology **2015-2018**
AMA Computer College
